

Practical Research Training in Hand Therapy and Surgery

5-day Master Class

March 16th – March 20th, 2020

Erasmus MC, University Medical Center Rotterdam, the Netherlands

Practical Research Training in Hand Therapy and Surgery

5-day Master Class

Content

This course is a specialized training in practical research methods for practitioners in the field of hand therapy, hand rehabilitation and hand surgery. In this week, we will cover both theory of medical research and basic practical skills for hand therapy and surgery research.

You will be provided with an orientation to quantitative and qualitative medical research from an epidemiological viewpoint and a general introduction to basic statistical concepts used in biomedical and public health applications. The different modules will review practical aspects of hand therapy and surgery research: clinimetrics, diagnostic tests, advanced literature search, peer review, systematic review, scientific medical writing and measurement.

Target group

Professional healthcare workers with a relevant degree from a school of physiotherapy, occupational therapy or medicine, working in the field of hand therapy or surgery who want to advance their skills in research methods and techniques both theoretical and practical. The number of participants for the course will be limited to 25.

Organization

Erasmus MC, University Medical Center Rotterdam
Department of Rehabilitation Medicine & Department of Plastic Surgery

Core faculty

Joy MacDermid, PhD, PT; Christina Jerosch-Herold, PhD, OT; Ton A.R. Schreuders, PhD, PT; Ruud W. Selles, PhD; Robbert M. Wouters, MSc, PT

Registration

www.handweb.nl/en/researchtraining2020
Registration: €795 until Dec 1st 2019, thereafter: €950
